

EZEQUIEL DE LA VEGA

Integrations & Site Reliability Engineer (SRE) | Cloud Infrastructure

Córdoba, Argentina | +54 9 3512024634 | ezequiel2014.edlv@gmail.com | | [linkedin](#) | [github](#) | [portfolio](#)

PROFESSIONAL SUMMARY

Information **Systems Engineering** student and Integrations & Site Reliability Engineer (**SRE**) at Avature. Experienced in architecting scalable hybrid cloud infrastructures, **zero-trust** networking, and proactive observability. Transitioned from resolving critical L2/L3 network incidents under strict SLAs to driving platform stability and production reliability for enterprise **SaaS** systems. Passionate about eliminating toil via IaC (**Terraform**), GitOps (**ArgoCD/K3s**), and DevSecOps.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (EC2, S3, RDS, IAM, Lambda, SNS, KMS, DynamoDB, Route 53, ECR), Terraform, Ansible.
- **Orchestration & GitOps:** Kubernetes (K3s), ArgoCD, Docker Compose, GHCR, Watchtower, Helm.
- **DevOps & CI/CD:** GitHub Actions (Multi-Arch Builds), Linux (Debian/Arch), Bash, Cloud-Init.
- **Security & DevSecOps:** Zero Trust (Tailscale, Cloudflare Tunnels), AWS OIDC, Trufflehog, Checkov, JWT, UFW.
- **Observability & AI:** Prometheus, Grafana, Loki, Custom Telemetry, Python (Django, Celery, Redis), Go, SQL.
- **Languages & Frameworks:** English (B2 Proficiency), Spanish (Native), OPI 2.0 Communication Framework.

PROFESSIONAL EXPERIENCE

Avature | Integrations Reliability Engineer | Aug 2026 – Present

- **Platform Reliability:** Act as the technical bridge between Support and Engineering to diagnose, analyze, and resolve production integration incidents across enterprise SaaS workflows.
- **Observability & Telemetry:** Leverage log management and monitoring tools (Kibana, Grafana) to trace API request/response behavior, build alerting strategies, and detect anomalous system patterns.
- **Root Cause Analysis:** Conduct deep-dive troubleshooting of HTTP protocols, data flow bottlenecks, and backend integrations to prevent recurring failures and improve platform stability.

Konecta (Telecom Argentina) | Technical Support Analyst (Tier 2) | Sep 2024 – Apr 2026

- **Incident Management:** Executed Root Cause Analysis (RCA) for residential L2/L3 network outages, utilizing telemetry to enforce 99.9% SLA compliance and reduce MTTR.
- **Troubleshooting & Docs:** Diagnosed TCP/IP and DNS failures, optimized internal knowledge bases via MkDocs, and engineered a centralized internal site that streamlined team operations.

TECHNICAL PROJECTS

MyssTic Ecosystem: Hybrid Cloud Infrastructure & AI SIEM | Jan 2026 – Present

- **Hybrid Cloud & IaC:** Provisioned AWS VPCs, Multi-AZ RDS PostgreSQL, and S3/DynamoDB backends via Terraform and Ansible. Automated deployments with GitHub Actions and AWS OIDC.
- **Kubernetes Edge & GitOps:** Migrated workloads to a bare-metal K3s cluster; implemented ArgoCD for declarative state sync, Pod isolation via Network Policies, and RBAC security controls.
- **AI Log Engine (Sentinel):** Built an asynchronous log parser using Django REST, Celery, and Redis, integrating Google Gemini LLM for real-time threat evaluation and automated Telegram alerts.
- **FinOps & Security:** Enforced Zero Trust networking (Tailscale/Cloudflare), applied S3 Glacier lifecycle rules to cut storage costs by 70%, and deployed serverless CloudWatch/Lambda alerting.

EDUCATION

- **Universidad Tecnológica Nacional (UTN FRC)** | Information Systems Engineering.
- **Certifications:** AWS Launchpad for Students (2026) | Full Stack Java Developer (2022).
- **Advanced Oratory, Persuasion & Influence (OPI 2.0).**
