

EZEQUIEL DE LA VEGA

Junior DevSecOps & SRE / Cloud Infrastructure Engineer

Córdoba, Argentina | ezequiel2014.edlv@gmail.com | [linkedin](#) | [github](#) | [portfolio](#)

PROFESSIONAL SUMMARY

Systems Engineering student and **Site Reliability Engineer** actively engineering **scalable, hybrid cloud infrastructures**. Transitioned from resolving critical Layer 2/3 network incidents under strict SLAs to architecting **automated, immutable environments**. Passionate about eliminating **toil**, specializing in **Infrastructure as Code (Terraform)**, **DevSecOps**, and **Zero Trust architectures**. Bridges technical execution with structured communication frameworks (OPI) to drive system resilience. Seeking a Cloud Infrastructure role to leverage a strong operational mindset and optimize cloud workflows (**FinOps**).

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (EC2, S3, RDS, IAM, Lambda, SNS, KMS, DynamoDB, Route 53), Terraform, Ansible.
- **DevOps & CI/CD:** GitHub Actions, GitOps, Docker Compose, Watchtower.
- **Security & DevSecOps:** Zero Trust Architecture, Cloudflare Tunnels, Tailscale, AWS OIDC, Trufflehog, Checkov, IAM Least Privilege, KMS Encryption, UFW, Fail2Ban.
- **Observability & Chaos:** Prometheus, Grafana, Loki, Custom Python Telemetry, Chaos Agents.
- **OS & Programming:** Linux (Debian/Arch), Bash (Cloud-Init), Python, Golang (REST APIs), Java, SQL.
- **Languages & Communication:** English (B2), OPI 2.0 Communication & Persuasion Framework.

TECHNICAL PROJECTS

MyssTic Warden: Hybrid Cloud-Native Infrastructure (Edge + AWS) | Jan 2026 - Present

- **Architecture, IaC & GitOps:** Engineered a hybrid edge-to-cloud environment bridging a bare-metal cluster with AWS VPCs, managed entirely via Terraform and Ansible. Implemented strict GitOps CI/CD workflows using GitHub Actions and Watchtower, securing remote state in S3 (AES-256) with DynamoDB locking.
- **DevSecOps, Networking & FinOps:** Enforced Zero Trust networking (Cloudflare Tunnels, Tailscale VPN) to bypass CGNAT and eliminate exposed ports. Provisioned self-healing EC2 Spot Instances to reduce costs by ~70%, eradicating static credentials via AWS IAM Roles, KMS, and Secrets Manager.
- **Database & Disaster Recovery:** Deployed a Multi-AZ RDS PostgreSQL database isolated in private subnets. Configured Amazon DLM for automated EBS snapshots to guarantee strict RPOs, alongside lifecycle-managed hybrid backups to AWS S3 and Glacier.
- **Event-Driven Observability & Chaos:** Built a comprehensive observability stack (Prometheus, Grafana, Loki) and Serverless alerting pipelines (CloudWatch, SNS, Lambda). Developed Python chaos agents to intentionally trigger OOM events, proactively validating cluster resilience and auto-recovery.
- **AI-Augmented Operations:** Leveraged generative AI models (Claude, Gemini) and Prompt Engineering to automate complex log analysis, refactor Python/Bash scripts, and accelerate incident troubleshooting.

PROFESSIONAL EXPERIENCE

Konecta (Telecom Argentina - Personal Flow) | Technical Support Analyst (Tier 2) | Sep 2024 – Apr 2026

- **Incident Management:** Executed Root Cause Analysis (RCA) for residential Layer 2/3 network outages, utilizing telemetry to reduce MTTR and escalating critical faults directly to Tier 3.
- **Troubleshooting & Documentation:** Maintained 99.9% SLA compliance by rapidly diagnosing TCP/IP and DNS failures, and optimized internal knowledge bases via MkDocs.

Apex America | Customer Support Specialist | Dec 2023 – Apr 2024

- Resolved 50+ daily high-volume account and billing inquiries, maintaining a **95%+ CSAT score** and ensuring strict CRM data integrity during peak call traffic.

EDUCATION

- **Universidad Tecnológica Nacional (UTN) | Information Systems Engineering (3rd Year Completed).**

- **Certifications:** AWS Launchpad for Students (2026) | Full Stack Java Developer (2022).
- **Advanced Oratory, Persuasion & Influence (OPI 2.0).**
