

EZEQUIEL DE LA VEGA

Junior DevSecOps & SRE / Cloud Infrastructure Engineer

Córdoba, Argentina | ezequiel2014.edlv@gmail.com | [linkedin](#) | [github](#) | [portfolio](#)

PROFESSIONAL SUMMARY

Systems Engineering student and **Site Reliability Engineer** actively engineering **scalable, hybrid cloud infrastructures**. Transitioned from resolving critical Layer 2/3 network incidents under strict SLAs to architecting **automated, immutable environments**. Passionate about eliminating **toil**, specializing in **Infrastructure as Code (Terraform)**, **DevSecOps**, and **Zero Trust architectures**. Seeking a remote Cloud Infrastructure role to leverage a strong **operational mindset**, optimize cloud costs (**FinOps**), and drive system resilience.

TECHNICAL SKILLS

- **Cloud & IaC:** AWS (EC2, EBS, S3, IAM, KMS, DynamoDB, DLM), Terraform.
- **DevOps & CI/CD:** GitHub Actions, GitOps, Docker Compose, Watchtower.
- **Security & DevSecOps:** Zero Trust Architecture, Cloudflare Tunnels, Tailscale, IAM Least Privilege, KMS Encryption, UFW, Fail2Ban.
- **Observability & Chaos:** Prometheus, Grafana, Loki, Custom Python Telemetry, Chaos Agents.
- **OS & Programming:** Linux (Debian/Arch), Bash (Cloud-Init), Python, Golang (REST APIs), SQL.

TECHNICAL PROJECTS

MyssTic Warden: Hybrid Cloud-Native Infrastructure (Edge + AWS) | Jan 2026 - Present

- **Architecture & GitOps:** Engineered a hybrid environment bridging a bare-metal edge cluster (Raspberry Pi 5) and AWS public cloud, managed entirely as code via **Terraform**. Implemented strict GitOps workflows using **GitHub Actions** for CI/CD, securing Terraform state in **S3** with **DynamoDB** concurrency locking.
- **DevSecOps & Identity:** Enforced Zero Trust networking via **Cloudflare Tunnels** and Tailscale mesh VPNs to bypass CGNAT and eliminate exposed ports. Eradicated static credentials by deploying **AWS IAM Roles** and Instance Profiles, while securing data at rest using **AWS KMS (AES-256)** on gp3 EBS volumes.
- **FinOps & Immutable Infrastructure:** Architected self-healing compute environments utilizing **EC2 Spot Instances**, reducing infrastructure costs by **~70%**. Leveraged **Cloud-Init (UserData)** and UFW for zero-touch server provisioning, automated OS hardening, and headless Docker bootstrapping.
- **Disaster Recovery & Chaos Engineering:** Configured **Amazon DLM** for automated, incremental storage snapshots to guarantee strict RPOs. Developed custom **Python chaos agents** to intentionally trigger OOM events, proactively validating Docker auto-recovery policies and cluster resilience.

PROFESSIONAL EXPERIENCE

Konecta (Telecom Argentina - Personal Flow) | Technical Support Analyst (Tier 2) | Sep 2024 – Apr 2026

- **Incident Management:** Orchestrated Root Cause Analysis (RCA) for residential **Layer 2/3 network outages** (FTTH/HFC), utilizing telemetry to reduce **MTTR** and escalating critical faults directly to Tier 3 ISP teams.
- **Docs-as-Code:** Spearheaded the architectural migration of legacy knowledge bases to a version-controlled **Docs-as-Code ecosystem (MkDocs)**, decreasing Tier 1 escalation rates and agent search time by **~30%**.
- **SLA Compliance:** Maintained **99.9% SLA compliance** across high-volume queues by rapidly diagnosing complex **TCP/IP, DNS, and DHCP** infrastructure failures.

Apex America | Customer Support Specialist | Dec 2023 – Apr 2024

- Resolved 50+ daily high-volume account and billing inquiries, maintaining a **95%+ CSAT score** and ensuring strict CRM data integrity during peak call traffic.

EDUCATION

- **Universidad Tecnológica Nacional (UTN) | Information Systems Engineering (3rd Year Completed)**
- **Certifications:** AWS Launchpad for Students (2026) | Full Stack Java Developer (2022).
